

Ribbon house - Process diagram

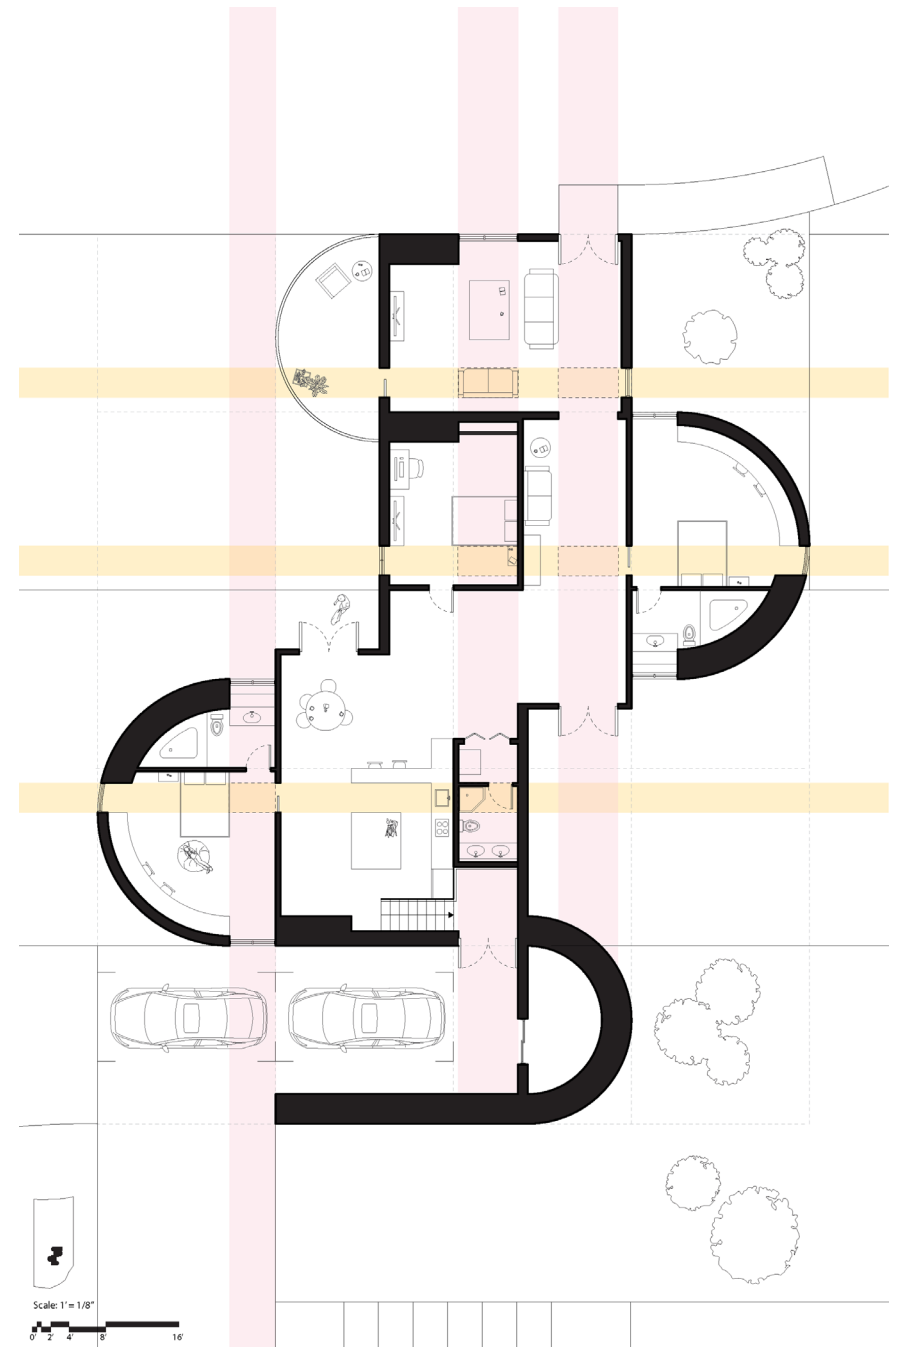

DWELLING #1 RIBBON HOUSE

PRINTER DIMENSIONS: 18W X 18L X 18H

This one storey, horizontal house is composed of a series of connected concrete prints using the popular 18'x18' Cobol printer. The first print area includes a kitchen, a bathroom and a bed as a prototype for a FEMA emergency response. The printer will be positioned multiple times during construction and can be brought back to the site at a future date to expand the home as the dwelling grows.
